

Parts and functions

<Whole unit>

<Camera body>

Direction marker for installation (TOP ↑)

- Points up when installing to a wall.

- FRONT must be positioned in front of the camera (on the i-PRO logo side).

■ Indicators

- **Note:** Lighting/blinking LED can be turned off with the software settings at any time. (The initial state is lighting or blinking.) Refer to the Operating instructions for information about settings.

LINK indicator When the camera is able to communicate with the connected device	Lights orange
ACT indicator When data is being sent via the network camera	Blinks green (accessing)
SD (MOUNT) indicator When an SD memory card is inserted and could be recognized	Lights off → Blinks green → Lights off
When data can be saved after the SD memory card is inserted and the SD ON/OFF button is pressed (less than 1 second)	Lights off → Lights green
When data can be saved to the SD memory card	Lights green
When the SD memory card is removed after holding down the SD ON/OFF button (about 2 seconds)	Lights green → Blinks green → Lights off
(recording)	Lights green → Lights off
(waiting for recording)	Lights green → Lights off
When data cannot be saved to the SD memory card because an abnormality was detected or the SD memory card is configured not to be used	Lights off
SD ERROR/AF indicator When AF (Auto Focus) operation is being executed	Blinks red (interval of 1 time/second)
When the network camera is being started	Lights red
When an SD memory card is recognized normally	Lights red → Lights off
When the SD slot is not used or an abnormality is detected in SD memory card after the camera has started	Lights red → Stays red
SD memory card warning/error indicator (off in the initial state) When a warning status is detected (SD memory card warning detection conditions: After the total use time has exceeded 6 years and the number of overwrite times has exceeded 2000)	Lights red
When an error status is detected (SD memory card error detection conditions: Write error, read error, etc.)	Blinks red

■ Buttons

- **INITIAL SET button (Initializing / NTSC ↔ PAL switch button)**
Follow the steps below to initialize the network camera. Retry if the camera does not start up normally. When the INITIAL SET button is pressed (less than 1 second), the MONITOR OUT terminal can be switched for the NTSC monitor ↔ PAL monitor. The monitor out is set to NTSC in the default settings of the camera.

*Do not turn off the power of the camera during the process of initialization. Otherwise, it may fail to initialize and may cause malfunction.

• SD ON/OFF button

- When the SD ON/OFF button is pressed (less than 1 second), the SD (MOUNT) indicator lights up in green and data can be saved to the SD memory card.
- When the SD ON/OFF button is held down (about 2 seconds), the SD (MOUNT) indicator lights off and the SD memory card can be removed.

• AF button

Press the AF button to automatically adjust the focus.

• TELE button

Press the TELE button to adjust the zoom ratio to the "Tele" side.

• WIDE button

Press the WIDE button to adjust the zoom ratio to the "Wide" side.

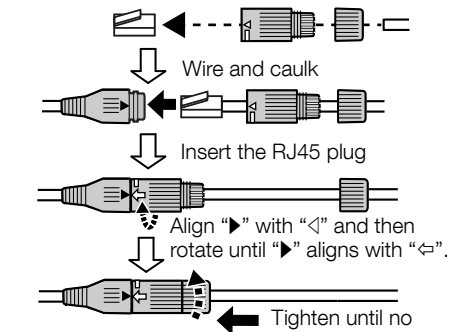

Step2 Making connections

IMPORTANT:

- Devices to which power can be supplied to this product are PoE hub, PoE power supplying equipment, and external 12 V DC power supply.
- Turn off each system's power supply before making a connection.

■ How to connect a RJ45 waterproof connector

IMPORTANT:

- When removing the RJ45 waterproof connector, be sure to remove it with the reverse procedure of connection.
- When connecting both the 12 V DC power supply and the PoE device for power supply, 12 V DC will be used for power supply.
- When the Ethernet cable is disconnected once, reconnect the cable after around 2 seconds. When the cable is quickly reconnected, the power may not be supplied from the PoE device.

■ Waterproof treatment for external I/O cables, power supply cables, audio input cables, and audio output cables

IMPORTANT:

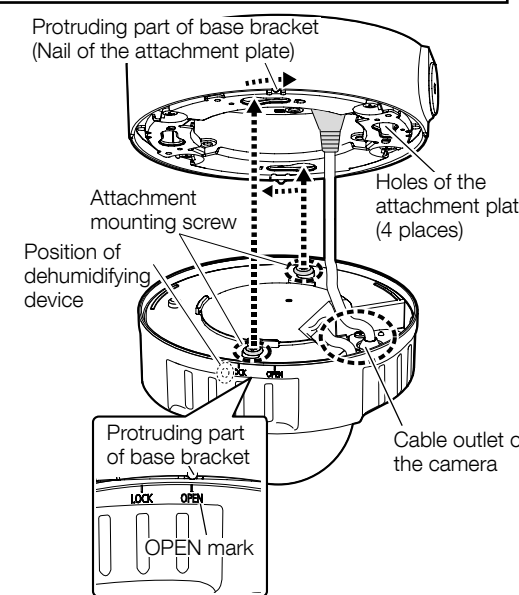

- Stretch the waterproof tape (accessory) by approx. twice its length and wind it tightly around the cable.
- At the start and end winding points, make the tape overlaps the external covering parts by approx. 20 mm (25/32 inches).
- For the above 4 types of cables, even if they are not used, waterproofing treatment must be performed on the connector parts.

- Install the connector and cable connection parts in locations where they aren't regularly exposed to rain or water.

Step3 Mount the camera

- Align the OPEN mark of the side of the camera with the protruding part of the base bracket, insert the attachment mounting screws (2 places) into the attachment plate, rotate the camera by approx. 15° and temporarily fix it.

IMPORTANT:

- When mounting to a wall, mount so that cable outlet of the camera faces up.
- For installation on the wall, install the camera with the dehumidifying device in a sideways or downward position. In a face-up position, the dehumidifying device doesn't work well as water accumulates on the surface.

- Loosen enclosure fixing screws (4 places) using the bit (accessory), and remove the enclosure from the camera.

IMPORTANT:

- Enclosure is fixed to the camera body by the installed auxiliary wire, so please do not remove it.

- Secure the camera by tightening the camera fixing screw (red).

Recommended tightening torque: 0.78 N·m (0.58 lbf·ft)

- Connect the MONITOR OUT conversion plug (accessory) to the MONITOR OUT terminal of the camera, and then connect the monitor for adjustment with a pin cable (locally procured).

- If necessary, insert an SD memory card by referring to "Insert / remove an SD memory card".

Step1 Processing the installation surface (process according to the installation type)

Common

- Attach the attachment plate (accessory) so that the marking (part number) faces toward the ceiling or wall to be installed.
- If open wiring is conducted, be sure to use conduits and run the cables inside the tubes to protect the cables from direct sunlight.

IMPORTANT:

- Installation work shall be such that there is no exposure to water into the architecture through the conduits having been joined.

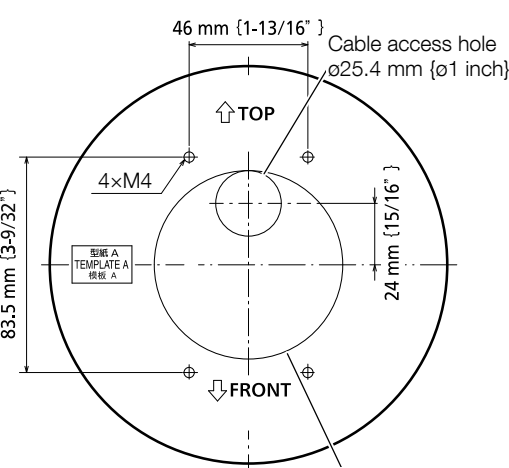

Junction box

- Install the junction box on the installation surface.
- Mount the attachment plate to the junction box.

Directly mount

- Drill a hole in the installation surface using template A (accessory). (4 screw holes / 1 cable access hole)

- Note:**
- When installing on a wall, make a hole so as to face the TOP mark of the template to the upper side.
 - When installing on a ceiling, make a hole so as to face the FRONT mark of the template to the front side of the camera (in the direction of i-PRO logo).
 - If you want to be able to change the direction of the camera after installation, drill through a 73 mm (2-7/8 inches) diameter hole in the center. By doing so you can adjust the mounting direction of the camera in 90° increments.

- Install the attachment plate on the installation surface.

Base bracket

- Make a hole on the installation surface using template B (accessory). (Screw holes (M4:4 places) / Cable access hole (1 place))
No cable access hole is needed when using conduit

Depending on the condition of the ceiling or the wall surface, six patterns of screw positions are available for fixation. Select a pattern from the following table and make holes.

	Vertical	Horizontal
A	85 mm (3-11/32 inches) (85.7 mm (3-3/8 inches))	85 mm (3-11/32 inches) (85.7 mm (3-3/8 inches))
B	138 mm (5-7/16 inches)	138 mm (5-7/16 inches)
C	83.5 mm (3-9/32 inches)	46 mm (1-13/16 inches)
D	63 mm (2-15/32 inches)	63 mm (2-15/32 inches)
E*	-	83.5 mm (3-9/32 inches)
F	70 mm (2-3/4 inches)	108.5 mm (4-9/32 inches)

* When mounting to a single-gang junction box, fix it with screws (2 pcs.) (M4: locally procured).

- Select either of the two cable access holes of template B to proceed with the installation work.
- After mounting the attachment plate, the mounting direction of the camera can be adjusted in 90° increments.

When using a conduit

- Remove the cap for the female thread for the conduit using a 5 mm (3/16 inches) hexagon wrench and attach the conduit.

The female thread for conduit is compliant with ANSI NPSM (parallel pipe threads) 3/4 or ISO 228-1 (parallel pipe threads) G3/4.

- Install the base bracket on the installation surface.

- Mount the attachment plate onto the base bracket.

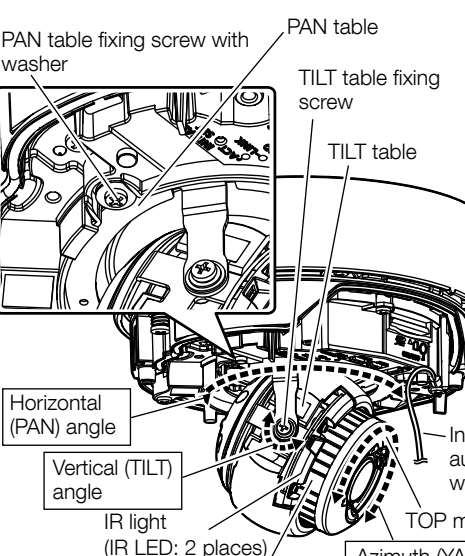

Step4 Adjustment

- Turn on the power for the camera and remove the protection film from the lens.
- Adjust the camera direction.

- Loosen the PAN table fixing screw with washer and the cross-head side of TILT table fixing screw (on one side).
- Adjust the angle of the camera while watching the adjustment monitor.
Horizontal (PAN) angle: ±180°
Vertical (TILT) angle: -30° to +85°
Azimuth (YAW) angle: ±100°

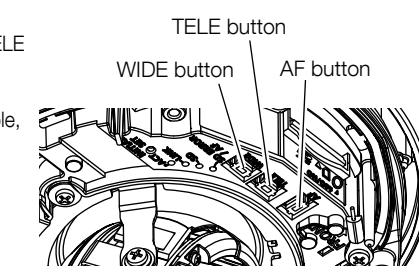

Note:

- When mounting the camera on a wall, adjust after rotating the PAN table by 180° to the left.
- When using the camera at a vertical position where the camera lens is nearly horizontal, part of the image may appear to be overlapped, part of the camera may be visible, and reflection from IR rays may appear on the screen when viewing images at night. To prevent this, decrease the vertical position angle or adjust the zoom ratio.
- Fix the camera unit by tightening the cross-head side of TILT table fixing screw (on one side) and the PAN table fixing screw with washer.
Recommended tightening torque: 0.59 N·m (0.44 lbf·ft)

- Adjust the zoom and focus.

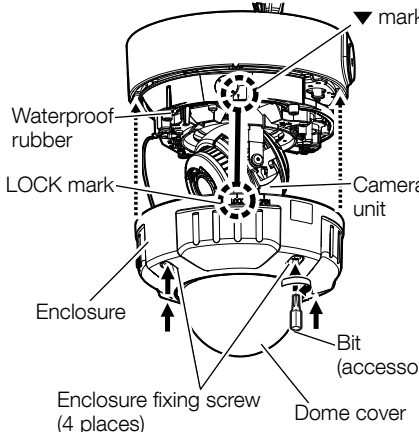

- While watching the screen, adjust the zoom ratio using the TELE button and the WIDE button and adjust the focus by pressing the AF (auto focus) button.
- Readjust the angle of the camera with the PAN table, TILT table, and azimuth adjustment ring if necessary.

- Disconnect the MONITOR OUT conversion plug (accessory). Attach the enclosure and secure it by using a bit (accessory) to tighten the enclosure fixing screws (4 places).

Attach the enclosure by aligning the LOCK mark to the ▼ mark on the camera body.
Recommended tightening torque: 0.78 N·m (0.58 lbf·ft)

- **IMPORTANT:** Make sure that the waterproof rubber is not detached from the groove.

- After complete installation, remove the protection film from the dome cover and attach the rain wash coating label (accessory) to the external part, etc. of the camera.

- Connect to the network by following information described on our support website <Control No.: 0123>.

- Refer to the Operating Instructions and perform the auto focus function from the setup menu.

Insert / remove an SD memory card

■ Insert an SD memory card

- Remove the enclosure from the camera.
- Insert the SD memory card into the end of the SD slot and confirm that a clicking sound is made.
- Take your finger off the SD memory card and check that the back end of SD memory card does not protrude over the upper part of the SD guide rib.
- After the SD memory card has been inserted, press the SD ON/OFF button, and make sure the SD (MOUNT) indicator is continually lit. (If you do not press the SD ON/OFF button after inserting the SD memory card, the SD (MOUNT) indicator is automatically lit approximately 5 minutes later.)
- Attach the enclosure to its original position.

■ Remove an SD memory card

When removing an SD memory card, reverse the procedure for inserting an SD memory card. Press and hold the SD ON/OFF button for approx. 2 seconds, and then remove the SD memory card after checking that the SD (MOUNT) indicator has changed from blinking to off.

IMPORTANT:

- Before turning off the camera power switch, make sure that the SD (MOUNT) indicator is turned off.

Note:

- When using an SD memory card, format it using this product. Refer to the Operating Instructions for how to format an SD memory card.
- Use compatible SD memory cards. Refer to our support website <Control No.: C0107> for latest information about the compatible SD memory cards.
