Edge AI 360-degree fisheye camera that provides video surveillance without any blind spots and business intelligence.

5MP Indoor 360 Fisheye Network Camera with AI engine

The new S-series fisheye camera is a new-generation camera equipped with an AI processor that realizes edge AI processing. With a high-performance fisheye lens and our own video compression technology, it is possible to clearly shoot 360 degrees in all directions up to the periphery of the screen with a single camera.
The camera is equipped with an AI processor, and contribute to solve various problems by installing an AI application according to the purpose.
It is possible to visualize the number of people and the congestion status with a dashboard that can be customized according to the customer's operation style, and use it for business intelligence purposes.

Key features

- The AI processor equipped with a camera realizes motion detection of people / vehicles, number counting, and congestion detection. It also supports third-party AI applications and can meet a variety of AI demands. The data aggregated inside the camera can be visualized on the dashboard in cooperation with our system, and can be used for marketing and business intelligence.
- Equipped with industry standard protocols such as ONVIF, it can be linked with third-party display software as an IoT terminal for sensor networks. Furthermore, it is possible to integrate and utilize it in another system customized according to the customer's operation.
- Equipped with a high-performance fisheye lens that has been well-established in the market, one camera can clearly shoot 360 ° in all directions up to the periphery of the screen.
- Our original smart coding compatible with H.264 and H.265 delivers high-resolution video at high image quality and low bit rate. Achieved useful images by combining with highly visible images by the intelligent auto (iA) function.

Key i-PRO Spec.

- 2192x2192 pixel fisheye images up to 30fps
- Intelligent Auto (with AI Engine)
- Super Dynamic 120dB
- Smart Coding (with AI Engine)
- ONVIF® Profile G / M / S / T
  *ONVIF is a trademark of ONVIF, Inc.

*1 Converted value
*2 When "On (level 30 or 31)" is selected for "Super Dynamic", the frame rate is restricted to a maximum of 15fps (30fps mode) or 12.5fps (25fps mode).
*3 Transmission for 2 streams can be individually set.
*4 When recording audio on an SD memory card, only use AAC-LC (Advanced Audio Coding - Low Complexity).
*5 The audio output can be switched to the monitor output.
    Refer to the Operating Instructions on the our support web site for descriptions of how to switch the output.

### ■ AI-VMD/AI People Counting with the 360-degree fisheye camera

AI Video Motion Detection

- AI differentiates between vehicles and people, detecting and sending warning notifications when an intruder enters a specified area.

- **Intruder detection:**
  Issues an alarm when a moving object enters a specified area.
- **Cross Line detection:**
  Issues an alarm when an object moving in the specified direction crosses a specified threshold.
- **Loitering detection:**
  Issues an alarm when a moving object enters a specified area and stays there for a specified amount of time.

People Counting

- **Cross Line Counting:**
  Counts the number of people moving in a specified direction and cross a specified threshold.
- **Area Counting(Queue Management):**
  Counts the number of people in the set area.
Cross Line Counting
Area Counting

Heat map

- Heat mapping provides statistical information about traffic flow and keeps counts for people passing through and loitering in the area.
Passing

Loitering

Occupancy detection

- The network camera uses its AI engine to detect congestion, providing data that can be used to direct visitor traffic flow in advance or help staff work more efficiently.
■ AI Privacy Guard for 360-degree fisheye

AI Privacy Guard

- AI can automatically mosaic faces and figures of people who are photographed to safeguard privacy and portrait rights.

i-PRO Active Guard

• The i-PRO Active Guard stores the best images and metadata captured by i-PRO network cameras, then collates this data with the watch list registered in the client software and issues an alarm when a match is found. The server does not require expensive hardware because i-PRO network cameras handle the advanced processing. The server can even be installed on the same hardware as the VMS. The system comprises the i-PRO Active Guard, the AI application installed on i-PRO network cameras utilizing AI engines, and i-PRO Active Guard Plug-in software for the VMS client.
