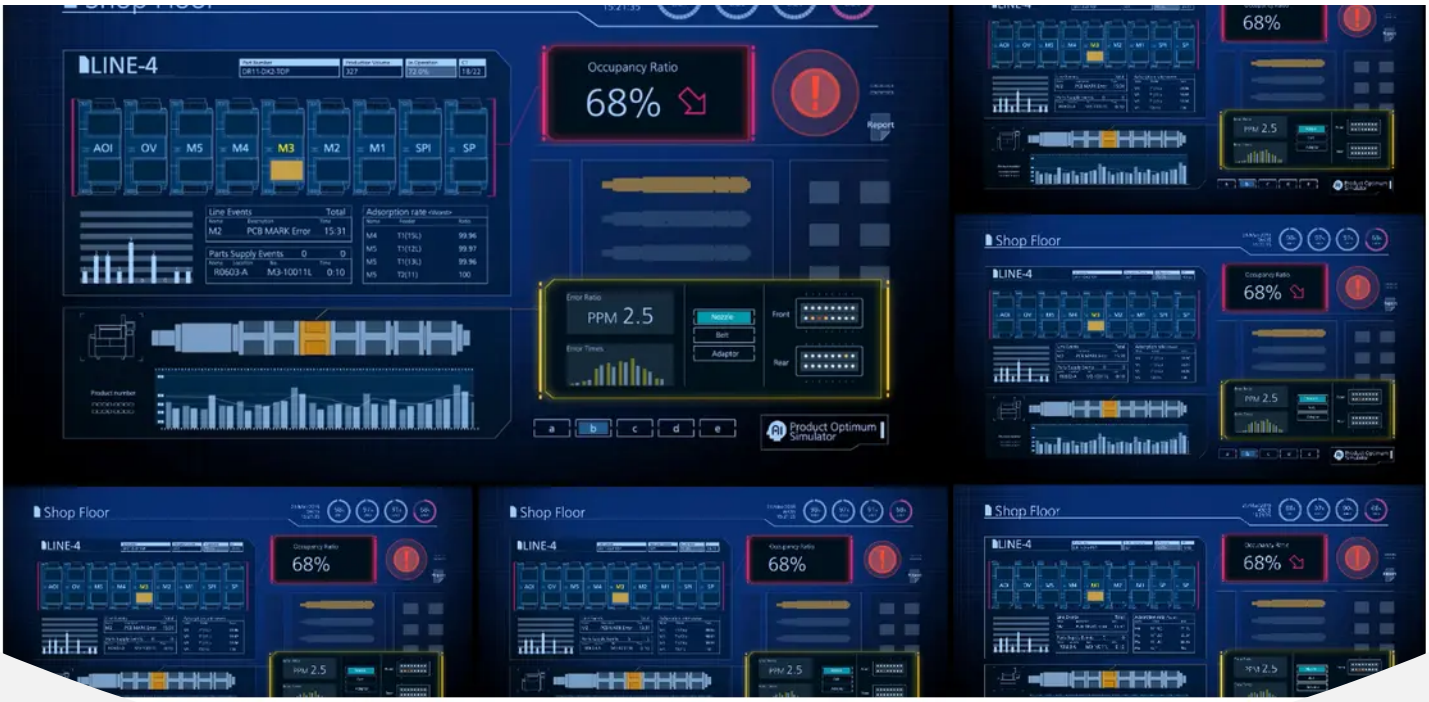
Panasonic CONNECT



Integration system for Panasonic and 3rd party's equipment

iLNB: line management system

In order to support productivity, quality control, and process methods in mounting production, it is necessary to control and manage the entire line as a whole, including not only Panasonic equipment but also equipment from other manufacturers. iLNB achieves this through various communication methods with equipment from other manufacturers.

Key Features

- Automatic changeover
- E-Link interface for Information input/input, machine control, and feeder write
- Communications to GEM/PLC
