

High yield, high throughput ultrasonic flip-chip bonding.

MD-P300 Flip-chip Bonder

The MD-P300 Flip-chip Bonder is process-flexible, combining flip-chip and thermosonic bonding in a single, small-footprint solution. The MD-P300 contributes to the cost-effective production (high yield, high throughput) of value-added devices. The MD-P300 can achieve high speed and high accuracy bonding through its low gravity point and lightweight bonding head. The MD-P300 supports 300 mm (12") wafers, and is an ideal solution for COB hybrid assembly in combination with an in-line Panasonic SMT placement machine. The MD-P300 is capable of fast cycle times and a placement accuracy of $\pm 5 \mu\text{m}$ at 0.5 seconds per IC (dry run) - with thermosonic processes at 0.65 seconds, including process times.
